FOR TOWING AND SALVAGE ANYWHERE IN THE PACIFIC.

Tugs up to 7,000 h.p., with 250 specialty barges operating from Mexico to Alaska, along the Pacific Coast of North America, the Caribbean and the Western Arctic.
Since 1925 Seaspan tugs have created an outstanding record in Pacific salvage and towage.

GERMANPILOTS BRAKE

PILOTAGE FOR
ENGLISH CHANNEL + NORTHSEA + BALTIC

PILOTS CAN BOARD/LAND ANY VESSEL EITHER OFF THURSO, BRIXHAM, CHERBOURG, DOVER OR ANY CONTINENTAL, BRITISH AND IRISH OR ANY BISCAY PORT. LICENSED BALTIC PILOTS AVAILABLE. HELICOPTER SERVICES AVAILABLE AT CHERBOURG AND GERMAN BIGHT.

TO OBTAIN A PILOT PLEASE CONTACT

GERMANPILOTS BRAKE

Telegram: Germanpilots Brake via Norddeichradio (DAN)
Telephone: Brake (04401) 4475

Requests for pilots should be sent prior to sailing/arriving pilot station

NORTHSEA, ENGLISH CHANNEL	48 hrs
NORTHSEA, UK, IRELAND	48 hrs
CONTINENT, BISCAY, BALTIC	24 hrs

ANTWERP DEEP SEA PILOT SERVICES

"EUROPILOTS ANTWERP"

DAY and NIGHT SERVICE **(24 Hours)**

Very Experienced Licensed British, Dutch, and Belgian Pilots
Always available at short notice

To Obtain Pilot:—

1. Send **TELEGRAM to "EUROPILOTS ANTWERP"** via any radio station, stating ETA BRIXHAM or CHERBROUG etc., **48 HOURS** Before arrival—All telegrams confirmed
2. Or **Telex 35488 SEAPIL-B.**
3. Or **Telephone ANTWERP (3) 4495675**

Pilots will board any Port N.W Europe

Boarding/Landing Places:—

BRIXHAM, CHERBOURG, CALAIS, THURSO (Pentland Firth), FISHGUARD, HOLYHEAD, and off other ports.

Vessels bound to/from Baltic Ports can Board/Land Pilot at Skagen.

HELICOPTER Service available, Charts etc. supplied on request.

Address:—
Capt. John G. Coyne
"EUROPILOTS ANTWERP"
24 Timmerdonckstraat
2520 Edegem/Antwerp
Belgium

PISCEAN INSTITUTE OF MARITIME STUDIES

Have you any idea how much American Universities have done for you

They have trained minds that invented television, computers, spacecraft—gave you vitamins, x-rays, lasers and miracle drugs—and turned hundreds of other ideas and dreams into reality and created better lives for all.

And they have trained minds that have revolutionised management concepts.

NOW

The International University, Missouri, U.S.A
through Pisces Conglomerate's

PISCEAN INSTITUTE OF MARITIME STUDIES

OFFERS external

Degree Courses leading to

BACHELOR OF BUSINESS ADMINISTRATION (B.B.A) and MASTER OF BUSINESS ADMINISTRATION (M.B.A)

The degree courses include all subjects of General Management in addition to Commercial aspects of Shipping Management and extensive practicals on

COMPUTERS

Other short term courses also available

For Prospectus remit Rs.25/- by M.O./P.O. to "Pisces Conglomerate" along with self addressed, stamped (Rs. 2.10) envelope of size 24 cms × 11 cms.

Capt. Amit Banerjee
(Course Director) 703, Shivam,
Opp. Pratap Society JP Road,
Andheri (W), Bombay 400 058.

THROUGH THE PORTALS OF THIS INSTITUTE WILL PASS OUT THE BEST TRAINED MINDS IN MANAGEMENT

Nicholls's Concise Guide, Vol. II.

Revised by EDWARD J. COOLEN

£27·00 *(per post £28·90 overseas £29·90)*

This is the eleventh edition of *Nicholls's Concise Guide, Volume 2.* It is complementary to and a continuation of the work contained in *Volume 1.* This new edition includes numerous changes, additions and new features.

Sections on the Sailings, Magnetic Compass, Ocean Passages and Tides have been revised and, to a large extent, re-written. Those relating to Radar Plotting, Tidal Calculations and Meridian Passage Star have been completely re-written. Information relating to charts and the section on Marine Surveying has been updated.

To take account of current practice, a list of symbols and abbreviations has been added, reference to quadrantal notation replaced by 360 degree notation, and terminology relating to celestial navigation updated.

Numerous figures have been re-drawn and new ones added.

New features include a check list system of instructions for Tidal Calculations, Radar Plotting, Passage Planning and for Finding Suitable Stars for Meridian Altitudes. Where appropriate, the various steps involved in calculations and procedure have been included in the worked examples and directly linked to the check lists and pro-formas provided. It is to be hoped that these inclusions will reduce learning times and be of assistance to the student working privately at sea and also, perhaps, to colleges in those parts of the developing world where there is a shortage of technical instructors.

Another new feature is the inclusion of a careful selection of extracts from official and other publications. The aim here has been to reduce the need for immediate reference to other publications and, so far as is possible, to make this volume self-contained. For those with limited budgets, this feature could be important. Examples of these extracts include: relevant *Collision Avoidance Rules* in the passage planning and radar sections, the *Admiralty Method of Tidal Prediction* in the section on tidal calculations, paragraphs from *Ocean Passages for the World, Symbols and Abbreviations Chart 5011* and, finally, more comprehensive *Admiralty Tide Table* extracts.

Summary Lists of the more advanced formulae used in navigation and astronomy have also been included.

As in previous editions, track and practice charts are included in the rear wallet. In this connection it should be noted that the new (Metric) practice chart BA5053 can be used for the exercises on the English Channel. It should also be noted that the Department of Trade (D.o.T.) has now changed its name to the Department of Transport (D.Tp.) and text references should be read accordingly.

OBSERVATOR
your pilot in all directions

The Rotterdam Admiralty chart agent with a world-wide range of nautical charts and books.
We hold European yacht & inland waterway charts & pilots.

We stock:-
chartroom instruments
chronometers
sextants
binoculars

We are agent for:-
Seiko, Patek Philippe & Thomas
Mercer chronometers
Observer clocks & barometers
Observator compasses & nautical instruments

We are at your service for: -
a rapid and efficient chart correction service
a supply of tracings for chart correction
an immediate despatch to any port in the world
compass adjustment and repair
chronometer, barometer and barograph repair

Pacific Steamers

By WILL LAWSON

£12.80 Per post £14.70 Overseas £15.70

The idea of this book originated many years ago, in yarns with old seafarers who had worked in ships of the pioneer services of the Pacific. By degrees the idea took shape, as more and more of the romance of it all was unfolded in terse sentences and long stories spun on the watersides of many ports, till it seemed that this would be a worthy work to engage in, so that those who knew them, and many who never could have known them, would see something of the records of the early Pacific steamers set out in print before them.

As the task of gathering the facts went on, it soon became evident that not every ship nor even every line, could be dealt with, so the scope of this volume had to be narrowed down to the passenger and mail lines, and again to those lines which had survived, at any rate until a few years ago, either in their original form, or in an incorporation which retained the principles of the old company.

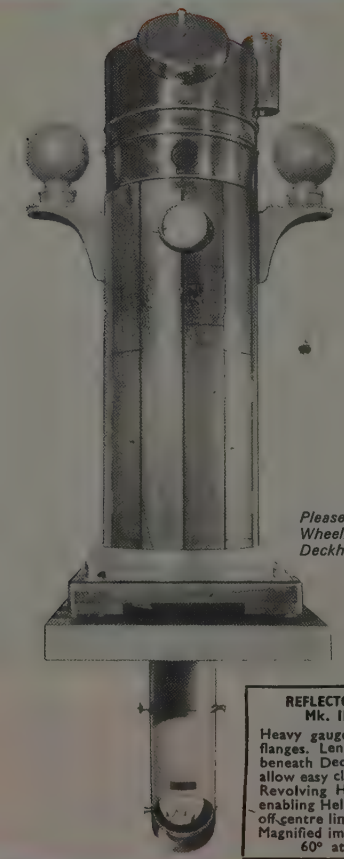
COOKE REFLECTOR BINNACLES

HUMBER Mk. II and HUMBER Mk. III with Type 161A Compass

Conforming to Department of Trade & Industry. British Admiralty Type Approved.

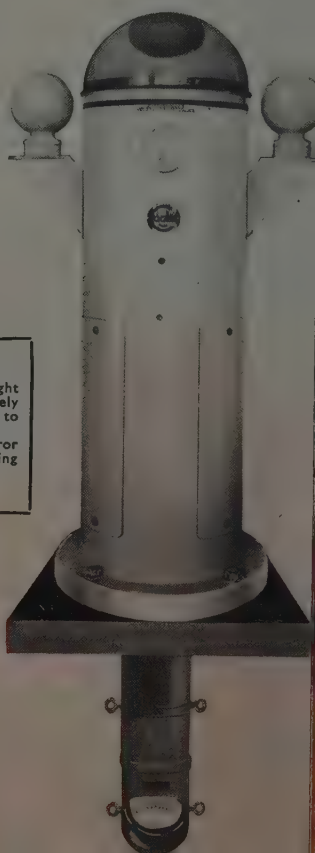


SPECIFICATION: BINNACLE, GLASS FIBRE Mk. III

Helmet. Removable dome, heat resistant.
Stand. Laminated Glass Fibre White Finish with Clinometer.
Lighting. Electric light from below with Mechanical Dimmer and emergency light fitment allowing Helmsman to see magnified reflected image of Compass at the same time bearings are being taken.
Correctors. Soft iron spheres. Flinders tube to take up to 24″ of 3″ soft iron bar, 61 cm x 7.6 cm. Horizontal magnets with access through doors.
Heeling Error. Centre Tube containing cradle holding up to seven vertical Magnets.
Height. Deck to Compass Card 44¾″. 115 cm. overall 54¾″. 139 cm.
Weight Complete. 164 lbs. 74·5 kilos.
Base. Round, 19¾″ diam. 50 cm. with Brass Deck Plates and Bolts. Cat No. 1203RF.

Holding British Admiralty Type Approved Certificate No. 197

Please indicateHeight of Wheelhouse Deck to Deckhead when ordering.



REFLECTOR UNIT AS SUPPLIED WITH Mk. II and Mk. III BINNACLES.

Heavy gauge tube fitted onto watertight flanges. Lens mounted into unit immediately beneath Deck Head. Unit is removable to allow easy cleaning of Lens.
Revolving Hood contains adjustable Mirror enabling Helmsman to see image if standing off-centre line.
Magnified image of Compass Card
60° at 4 ft. 40° at 8 ft.

SPECIFICATION BINNACLE – TEAK Mk. II

Brass Helmet and Rim. Grey finish.
Wood Stand. Polished Teak. Hinged doors for access to corrector magnets
Lighting. Electric light from below with Mechanical Dimmer allowing Helmsman to see magnified reflected image of Compass at the same time as bearings are being taken. Instantaneous Emergency Lighting
Correctors. Soft Iron spheres, Flinders tube to take up to 24″ of 3″ Soft Iron Bar, 61 cm. × 7·6 cm
Heeling Error. Centre Tube containing cradle holding up to seven vertical Magnets
Height. Deck to Compass Card, 43″. 107·5 cm. overall 53½″ 133 cm
Base. Square base 20″ × 20″, 50·8 cm. with Brass Deck Bolts and Plates allowing Binnacle to be slewed through 6° of arc.
Extra if required — Polished Brass. Specify "S"
Weight Complete 220 lbs 100 kilos. Cat No. 1200RT.

Specify **COOKE**

SUPPLIED WITH HUMBER BINNACLES

TYPE 161A SPIRIT COMPASS

6½" 165 mm Dia. Card. 0-360° with ¼ Pts. Engraved Verge. Suspended in Gimbal using Phosphor Bronze Bearings.

Diameter of Gimbal 12" 304 mm.
Diameter of Bowl 9⅜" 246 mm.

Conforming to Board of Trade Notice, ISO 2269 and holding the British Admiralty Type Approval Certificate No. 12888.
Cat. No. 1017R.

AZIMUTH MIRROR

Standard Merchant Navy Brass Ring Pattern. Utilizing Phosphor Bronze Spring Stops to ensure close fit and to prevent seizing.

2 Different Density Shades and Shadow Pin. Complete in Storage Case.

Also made adaptable to fit existing compasses.

Enquiries kindly quote the following numbers:

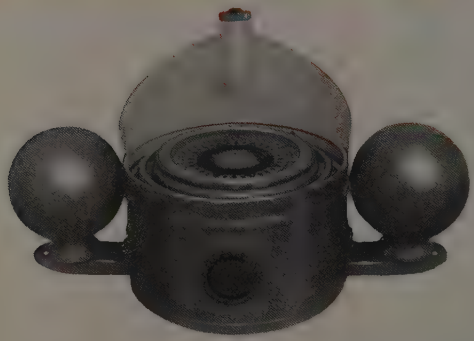
"MONUMENT"

DECKHEAD COMPASS

Type 161A Transparent Spirit Compass, 6½" card graduated in quarter points and degrees. Extended lubber line Brass rim with securing flange, detachable helmet, vertical force corrector Electric lighting and emergency lighting. Soft iron spheres and necessary correcting magnets Cat. No. 1051

Weight 63 lbs. 28½ kilos.
Overall height 16½".
Maximum diameter 15".

Reflecting device to bring magnified image of card down to eye level of helmsman. Cat. No. 1051 A



"WHITBY"

SHELF MOUNTING COMPASS

For TUGS, COASTERS & YACHTS Etc.

SPECIFICATION:

Spirit Compass, with 6" card, transparent bowl. Brass rim with internal securing flange.

Pin point electric light fitting and Emergency Lighting. Brass Shadow Belt, Heeling Error tube and cradle (not illustrated), soft iron spheres, Corrector Magnets. Grey finish. Base Diameter, 12". Overall Height, 12". Overall width (with spheres) 22".

Cat. No. 1018. Weight 43 lbs. 19.5 Kilos.

Brass Helmet with window lighting from below in lieu of shadow belt. Cat. No. 1018H

Polished brass finish specify "S".

ACO type approved Certificate No. 12914.

Azimuth Mirror suitable for above Cat. No. 1070

Cooke HULL

STEERING

COMPASS MAGNIFIER

An excellent Steering Compass Magnifier, adaptable to most Compasses Adjustable feet. 5" Lens..
Cat. No. 1071.

COOKE PELORUS

"COOKE" PELORUS

7" diameter acrylic dial showing white with black markings 0-360°. Designed so that degrees and figures will not wear off with normal use.

Folding sights, gimballed and with counterpoise weight to take up pitch and roll.

Supplied with port and starboard rail brackets and chart room stowage bracket.

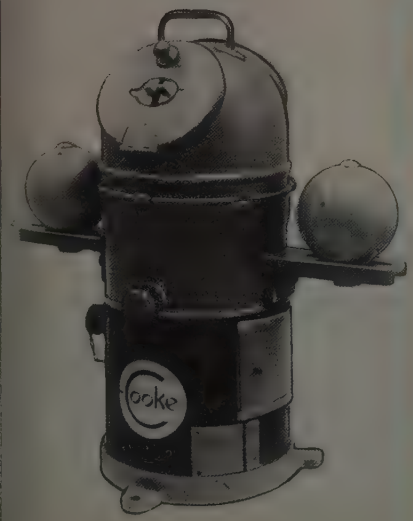
Complete as above Cat. No: 1072.

UTOMATIC PILOT

odels are available to suit all types and sizes of vessel.

hey can be supplied to work in conjunction with either Magnetic or yro Compasses and to operate with any form of steering equipment.

rther information will be supplied upon request. Details of vessel ill be required in order to submit quotation.



THE PERFECT MINIATURE STANDARD BINNACLE & COMPASS

ADMIRALTY PATTERN

With 3½" 9 cm dia. Dead-Beat 0—360° card in 5" 13 cm. dia. liquid-bowl, knife edge gimbals and suspension. 7½" 18 cm. dia. polished teak binnacle with sliding brass doors for access to electric lighting and corrector magnets. Dome top, hinged front shutter sliding night shades and lifting handle. Soft iron spheres, heeling error cradle, deck plates, corrector magnets grey finish to brass work. Overall height 18". 46 cm. Dia. of Base 8". 20 cm. weight complete, 30 lb. 8 oz. 13.835 kilos.

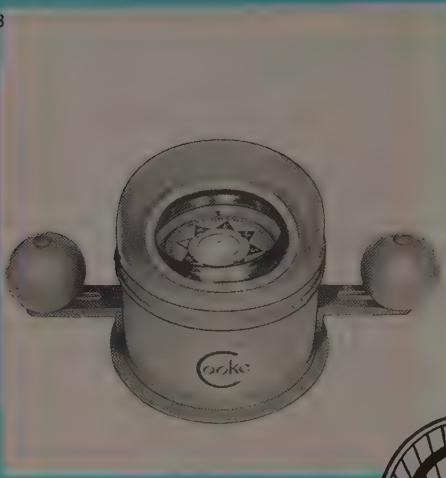
Cat. No. 1055.

As above, but with Azimuth Sight.

Cat. No. 1056.

Vertical Card Reading Device, making image for steering equal to that of a 6" Card. 15 cm.

Cat. No. 1056A.



"SKIPTON"

COMPASS
FOR SMALL VESSELS

SPECIFICATION:

"COOKE" Transparent Liquid Compass with 5" card, graduated in quarter points and degrees.

Complete in brass binnacle with detachable helmet, electric light from below, emergency lighting and corrector magnets. Grey finish.

DIMENSIONS

Overall height 11" Base diameter, 10¼"
Weight 16 lbs. 7.25 kilos.

"SKIPTON" Binnacle and Compass without spheres. Cat. No. 1040

Grid Steering Type Cat. No. 1040G.

EXTRA TO ABOVE IF REQUIRED

Polished Brass Finish. Specify "S".

Sphere Brackets and soft iron Spheres Cat. No. 1041.

OPTICAL HAND BEARING COMPASS

MODEL KB-14/360

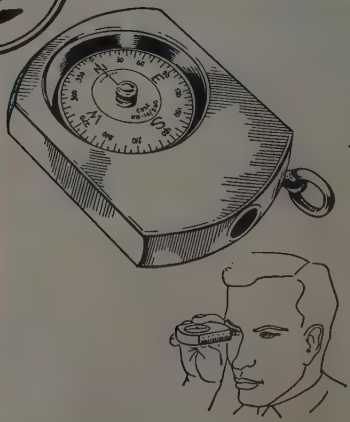
For taking a bearing precisely and quickly. Designed for ever-ready operation with accuracy—to 1/6th of a degree, the reading being apparent upon sighting the instrument. The small size—2¾" x 2" x ⅝"—of the robust casing which consists of an alloy material resistant to the action of sea water makes the KB-14/360 easily pocketable even when in the case supplied. A neck sling is also provided as an added convenience.

The following variations are available:

KB-14/360 Standard model.

KB-14/360RT Reverse scale

With everlasting Tritium Lighting.



The HULL AUTO-DINGHY COMPASS

Complete with built-in compensator magnets to offset the magnetic field in car or boat. Vertical Reading Card 0–360° notation in 10° with Cardinal Points. Shelf mounting non-ferrous Metal Brackets and Rubber Suction Pad for windscreen mounting if desired. Overall dimensions without bracket 3½" × 2"

Non-illuminated. Cat. No. 900

Illuminated. Cat. No. 800

"MAJOR"

COMPASS FOR MOTOR AND SAILING YACHTS, COMMERCIAL AND SMALL FISHING CRAFT

"MAJOR" Binnacle Model. Cat. No. 122

This compass, with full correction facilities, is fitted in a white moulded binnacle. The oil-filled bowl uses a C3 card, internally gimballed. Complete with light fitting — state 12 volt or 24 volt.

Bowl dia.	6 in	153 mm
App. Card dia.	6 in	153 mm
Flange dia.	7¼ in	180 mm
Height	9½ in	240 mm
Weight	11¼ lb	5·215 kg

For variations and additions to the standard compass add the appropriate letters to the catalogue number :–

With quadrantal correctors.....QC
With rheostat.....RH
With Brytlit illumination.....BT

GLOBE COMPASSES

INTERNALLY GIMBALLED

CAN BE USED FOR EITHER BULKHEAD *OR* WELL MOUNTING

Both have Card with Top Scale and Edge Reading and Electric Illumination – with 5° graduations. U90 has additional Clinometer Scale when used in the vertical position.

These are only two of the many models we stock suitable for the Small Boat Owner or Yachtsman.

Reading to one second of Arc is used in the final testing of our KINGSTON SEXTANT

A reliable sextant continues to be the one indispensable instrument of the navigator. The Quality of such an instrument is dependant on the skill of the craftsmen, instrument makers and opticians alike, sharing in the task of reaching perfection.

Navigators generally, have little knowledge of Sextant Manufacturers' testing devices, which have been developed until, at last, the perfect instrument is in being.

We cordially invite any Navigator, when in Hull, to bring his sextant to our Factory and see it tested on this precision instrument.

A general indication of the overseas reception of our Navigational Instruments —

B. Cooke & Sons Ltd.,
Kingston Observatory,
58/59 Market Place,
Hull HU1 1RH
England.

Richard Rathsmann
D 6000 Frankfurt,
Eschenheimer Anlage 23,
W. Germany

Dear Sirs,

As previously requested I am writing to verify the receival of the Kingston Sextant. In passing I would like to note and bring to your attention that I am in fact very pleased with the excellent manufacture of this indeed to be quoted as a noble instrument; the engineering and design has exceeded my expectations.

I thank you again for the transmittion of this instrument and remain a very satisfied customer.

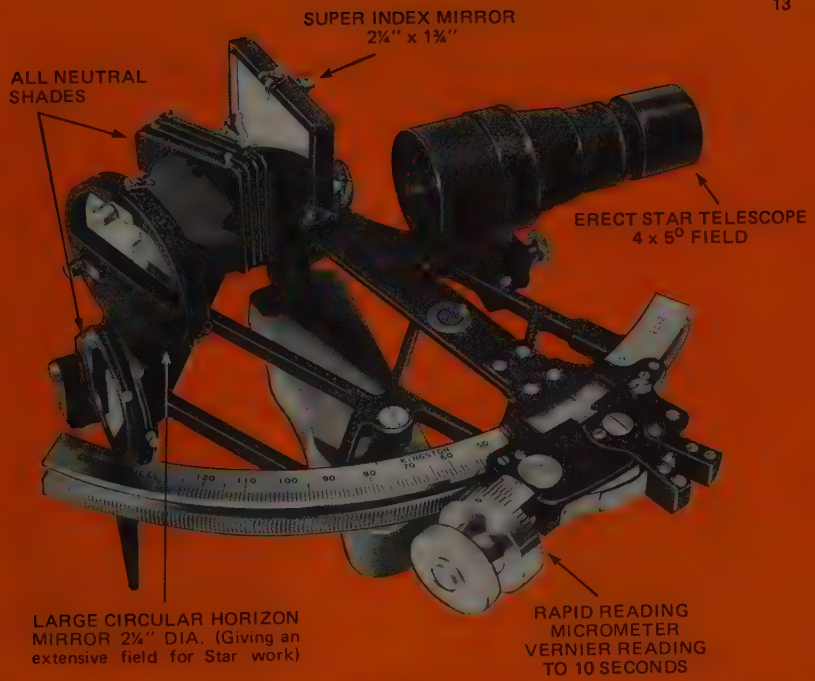
Yours sincerely,

R. Rathsmann

THE "COOKE" HEELING ERROR INSTRUMENT

An essential instrument to determine the Vertical Magnetic Field of the vessel at the compass position. To prevent oscillation of the compass card.

Cat. No. 1075.



THE COOKE "KINGSTON" MICROMETER SEXTANT

Made especially adaptable for Star Observation

The above 6½" Radius Sextant is finished in Silkette Ripple with untarnishable nickel screws, the mirrors are fully protected from salt air and spray. All bloomed lenses to erect Star Telescope, spiral focusing. As illustrated with adjusting pin, oil bottle, weight 3 lb. 4 oz.

Wood case, cabinet finish, lock and key.

COOKE Observatory Certificate.

Cat. No. 2046

EXTRAS

If supplied in lieu of 4 × Erect Star Telescope.
Quote Cat. No. 2046P.
With A.C.O. Certificate Price on application.

The Sextant suggested by Navigators at an Economic Price.

Generous allowance on your old sextant in part exchange.

DUAL FUNCTION HEY-LOH

Powered Megaphone, Completely Transistorised MARK 4 — Speech and Signal

The MK4 dual function Hey-Loh is the latest model providing for speech amplification or signalling, with a loud, penetrating, tone.
The handle contains the battery pack, which takes 8 readily obtainable AA size batteries, the switch lever which is squeezed for speech, and the signalling button which when pressed with the thumb transmits the penetrating note. The heart of the electronics is a monolithic integrated circuit with separate preamplifier and power amplifier. The controlled reluctance microphone is matched to the preamplifier for maximum speech intelligibility, and the horn-loaded, pressure loudspeaker unit is matched to the output of the poweramplifier for optimum power transfer. The overall system is designed for the highest possible efficiency in terms of battery life to sound pressure level. The horn, handle and microphone housing are moulded from corrosion-resistant A.B.S. and the overall construction is designed to resist the most arduous climate conditions.

Technical Details
Dimensions: 192mm x 284mm x 220mm dia.
(7½" x 11¼" x 8¾" dia.)
Weight: 1.13Kg (2½lbs) complete with batteries.
Range: 0.5 to 0.8Km } SPL 60dB @ 0.5Km
550 to 875 Yds } dependent on Conditions.
Effective SPL: 115dB Peak @ 1 metre.
Amplification: 100 times the average human voice.
Battery Life: 4000 10–15 second message.
Type of battery: 8 x 1.5 volt AA size.
Recommended types:
HP7 MALLORY MN1500 UM-35
Microphone: Controlled reluctance.
Amplifier: Monolithic integrated circuit.
Loudspeaker: Horn — loaded pressure type.
Operating ambient temperature: -20^{o} to $+70^{o}$C.

Features
- 2 facilities — speech and signal.
- Solid state electronics.
- Corrosion resistant, high impact horn.
- Long battery life.

MARINE ELECTRONIC CHRONOMETERS

HAMILTON MARINE QUARTZ CRYSTAL CHRONOMETER

Split second accuracy (within 1 minute per year). This battery operated Quartz Crystal 400 day movement, in brass case gimbal mounted within an attractive Mahogany cabinet with brass fittings and protective corners. As tested and rated by Admiralty Chronometer Dept. Herstmonceux. Complete with Guarantee.
Dimensions 6¾″ × 6¾″ × 6¾″ Weight 5lb. 5oz.
Cat. No. 135

Wempe Chronometer in highly polished Mahogany Case complete with Rate Certificate and Guarantee.

Cat. No. 136W

Standard Two day Marine-Chronometer by Thomas Mercer complete with inner and outer guard case with Rate Certificate and Guarantee.
Cat. No. 134.

MICROSPLIT

Stop Watch functions with 1/100 sec. reading and split-second feature up to 59 min. 59·99 sec.
Time of day/date can be called up if desired.
Quartz accuracy ±0·0004%.
Battery lasts over 2 years.
Suregrip water resistant case.
Cat. No. 1000N.

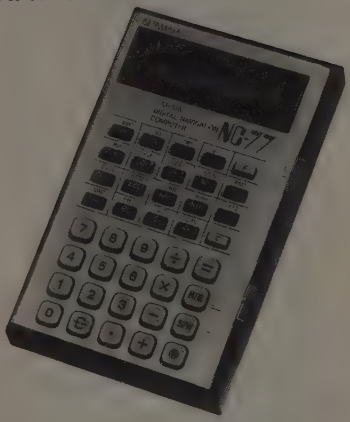
STOP WATCHES

1/5 of sec. Recorder 0–30 min. Register stop on balance system start, stop, instantaneous fly back.
Cat. No. 82W

Similar to above but with start, stop, and go on and instant-aneous fly back.
Cat. No. 83W

DIGITAL NAVIGATION COMPUTERS

INVALUABLE TO THE NAVIGATOR



Tamaya – The Worlds first long term Nautical Almanac microprocessor for GHA and Declination of the Sun, GHA of Aries and Equation of time with accuracy 0-0'·3.
Specially designed, permanently built in programmes for all major navigation problems.
Metric/feet selection key.
Handsome felt-lined wooden protection case included.
Operating Temperature: 0 – 40°C.
Power Consumption: DC 0·8W – battery operated, adaptor optional (state voltage).
Dimensions: 82 × 27 × 150 mm.
Weight: 250 grams.

Cat. No. NC-77.

SHARP COMPUTER

PC 1500A Pocket Computer.
Similar to illustration.
System Rom 16K Bytes.
Memory Ram 8.5K Bytes.
Supplied with Astro-navigation.
Program module CN-2000.
Nautical almanac data, even for planet and moon sights.

Optional – 4 colour graphic printer complete with adapter and cassette interface.

Cat. No. CE150

Walker Wind Equipment for Merchant Ships

The anemometer consists of a masthead cup unit and indicator. The cup drives a small A.C. generator which feeds the indicator to display the wind speed. Standard dial calibration is 0-80 knots and equivalent Beaufort Scale.

Cat. No. XMS1

The wind direction equipment consists of a masthead vane unit, operating from a low voltage supply, and which transmits the wind direction to the indicator. This indicator matches in style and appearance the wind speed indicator and is calibrated 0-180°-0 either side of the bow.

Cat. No. XMD1

Both instruments have dials of approximataly 6″(150 mm) diameter and a panel size of 11¼″ x 9¼″ (292 mm x 235 mm). They are fitted with electric illumination and internal dimmer dontrols. The necessary power supplies are built-in and the equipment can be supplied for any A.C. supply voltage. Standard voltages are 115 volts or 250 volts A.C. Alternative calibration can be supplied for either instrument to special order

The instruments are supplied with connecting cables, plugs and sockets.

SERVICE DEPARTMENTS

COMPASS

Compasses and Binnacles for all types of vessels, Azimuth Mirrors, Pelorus Compass Magnifiers, D.O.T.I. Compass adjusters available at all times to give advice or adjust compasses. REPAIRS to compasses executed promptly.

OPTICAL

Binoculars, Telescopes, Navigational and Survey Sextants, Distance Meters, Theodolites, Surveying Levels.

ELECTRONIC

Voltmeters, Ammeters, Kilowatt meters, and Test meters, Galvanometers, Electronic Servo Systems. All types of industrial instruments.

INSTRUMENTATION

Pressure Gauges, Distant and Direct Reading Thermometers, Manometers, Pneumacators, Tachometers, Pyrometers, Sounding Machines, Ships Log Equipment. All Instruments allied to heat treatment and Temp. Control.

HOROLOGICAL

Chronometers, Chronographs, Stopwatches, Clocks, Marine, Industrial and Domestic. Watches, Recorders, Micrometer Dial Gauges, Electric, Battery and all clockwork mechanisms Tested Electronically and Guaranteed.

EXPORT

Instruments of all types, Charts and Nautical publications regularly despatched to all parts of the world. Your enquiries are invited.

CHARTS

ADMIRALTY AGENTS

Our Chart Department has a world-wide reputation for the sale and correction of Admiralty Charts and Hydrographic Publications. World outfits can be corrected with speed, economy and efficiency.

All Nautical and Technical Publications Available.

Phone, write or visit our Chart Dep.

PRELIMINARY

Introductory

Calendar 1988—1989

Eclipses.

Phases of the Moon.

Altitude Correction Tables for Sun, Moon and Stars.

Conversion Tables.

NOTE—To facilitate the frequent reference to the above Tables they are now given on Pages 6 to 10.

INTRODUCTORY

THE present edition is the 111th annual publication of *Brown's Nautical Almanac* and, as in former years, unremitting care and attention have been given to its preparation.

The Greenwich Hour Angle tabulations and the arrangement of the Ephemeris are in line with the layout of the British and American Nautical Almanacs. Attention is directed to the Table for the correction of Altitudes and Conversion purposes. These are given in the Preliminary Section, pages 6 to 9, for quick and easy reference.

The *Almanac* is arranged in parts that are numbered for ready reference from I to VII as follows—I, Astronomical data in daily use by navigators, page 20: *et seq* explanations of its use being given in pages 15 to 17. II, Nautical Tables and Methods, page 313. III, Tide Tables for Home and Foreign Waters, page 341. Predictions have been compiled by the most reliable authorities as acknowledged on page 342. The Tidal Constants for British Isles and Foreign Ports, pages 435–449. IV, Coastal Courses and Distances around the British Isles, page 463. Courses are given Correct Magnetic (1981) and in True (3-figure) notation. Distances are given to the nearest 0·25 of a mile. The Table of Courses and Distances around the British Isles, North Sea, English Channel and the Baltic Ports starts on page 489. V, Distance Tables giving a world-wide coverage of total distances from the principal ports of Britain, U.S.A. and Canada, to all important ports of the world. Numerous other tables give inter-port distances in the important areas, page 495. VI, Miscellaneous Information, Legal, Technical and General, start on page 559. VII, Lights, Beacons and Buoys of the British Isles including Eire and Channel Isles, page 731 (Corrected to 31st May 1987). Pilotage Information, page 830.

Section VII has been revised to conform with notices issued by Admiralty, Hydrographic Authorities and Port Authorities. Up-to-date information is given in the permanent oil and gas platforms for the British and Continental Shelf on pages 630–631.

Some new tables have been added throughout, which include Distances Table on page 542, the G.M. Table by Rolling Period and the Beam in metric units, page 707, an Expanded Date Table, page 430, Time Conversion Table, page 561, and a new article for the guidance of use of Hydrometers for draught survey purposes, pages 568 to 569.

Tidal Constants for both British and Foreign Ports have been completely revised. The other sections have been brought up to date as much as possible.

The Editors of *Brown's Nautical Almanac* would like to thank the many persons who supplied new tables and articles for this edition.

The *Almanac* has been carefully edited and arranged to ensure accuracy, ease of reference and that comprehensive brevity which is essential in nautical books in daily practical use.

NOTE—While the publishers have used every means in their power to ensure accuracy in the compilation of this Almanac, it is understood that they do not hold themselves responsible in any way for any errors, inaccuracies, etc., either on the part of themselves or others.

BROWN'S NAUTICAL ALMANAC is copyright, and the Publishers hereby give notice that any infringement of the same, by reproducing any figures, or any part of the Almanac, will be proceeded against.

Certain of the matter in this Almanac has been compiled from *The Nautical Almanac* and publications of the Hydrographic Department of the Admiralty. The Tidal Information has been supplied by the Proudman Oceanographic Laboratory, Bidston Observatory, Birkenhead, Merseyside L43 7RA, permission to use the tidal figures having been given by Controller of H.M. Stationery Office and the Hydrographer of the Navy.

The Publishers wish to thank all those navigators who have made possible the continued popularity of this Almanac by their criticism and advice. *Brown's Nautical Almanac* is produced to be a book of practical service to all officers and men. We always welcome views or hints on any improvement which from your experience would enhance its usefulness.

We cordially invite anyone interested to write to the Editors, *Brown's Nautical Almanac* 4-10 Darnley Street, Glasgow G41 2SD, Scotland.

Whit Sunday	May 22		

ECLIPSES, 1988

March 17-18: A Total Eclipse of the Sun. The eclipse begins at 23h 24m on 17th March and ends at 04h 32m on the 18th March. The eclipse is visible over Indonesia and the North West Pacific.

August 27: A partial eclipse of the Moon. The eclipse begins at 10h 08m and ends at 12h 00m. It is visible over the western part of North and South America, the Pacific Ocean, Australasia and the eastern part of Asia.

September 11: An Annular Eclipse of the Sun. The eclipse begins at 01h 46m and ends at 07h 41m. The eclipse is visible over the Indian Ocean.

THE SEASONS, 1988

Spring commences March 20d 09h 34m

Summer commences June 21d 03h 00m

Autumn commences September 22d 19h 30m

Winter commences December 21d 16h 00m

ENGLAND—FLOOD AREAS

For Liverpool and West Coast Generally—Should there be a moderate gale from the West or South-west, abnormal heights may be expected, and the low-lying districts of Liverpool, and other places along this coast may be flooded.

For the East Coast—A brisk wind from the North, North-west and West, accelerates the flow of the Tides on this Coast, and increases considerably the depths as given in these tables. The low-lying districts from Aberdeen to London will also experience overflows.

The direction of the wind should be carefully observed, also the state of the Barometer. A fall of an inch (34 millibars) in the Barometer increases the depth by about 14 inches (36 centimetres) and decreases it by a similar amount when the barometer is high.

DIP CORRECTION

Height of Eye—15 ft. = 4′ ·4+; 20 ft. = 3′ ·8+; 25 ft. = 3′ ·3+; 30 ft. = 2′ ·8+; 35 ft. = 2′ ·4+; 40 ft. = 2′ ·0+ 45 ft. = 1′ ·6+; 50 ft. = 1′ ·3+; 60 ft. = 0′ ·6+ and 70 ft. = 0′ ·0−.

TABLE FOR CONVERTING TIME INTO ARC AND THE REVERSE

The table for converting Time into Arc and the reverse is of the greatest use as the conversion can be done both with rapidity and practical accuracy.

Examination of the table will show that the hours and minutes are given corresponding to each degree of arc; the first column in addition, also represents the minutes and seconds of time for minutes of arc.

The table will be found exceedingly simple to use, and is best illustrated by examples. It will be seen that accuracy is gained by interpolation.

EXAMPLE—

Arc into Time

Convert 91° 52′ 20″ into Time

91°	= 6h 4m
52′	= 3m 28s
20″	= 1·3s
	6h 7m 29·3s

Time into Arc

Convert 11h 42m 39s into Arc

11h 40m	= 175° 00′
2m 39s	= 39¾
	175° 39′¾

Port Tack —

COMPASS TO CHART
Starboard Tack —
Port Tack +

The fact that the New Pattern Compass is now used for W/T bearings, sectors of light in the Light Lists, and to a considerable extent in general navigation, makes the above Conversion Table very useful.

When courses and bearings are read in quadrantal graduation they should be changed into the 360° system from the Table and the error applied according to the rules given.

The rules above the Table are for Compass Error and those underneath are for Leeway.

Example:—Find the Compass Course to make S. 37° E. (true). Compass Error 13° W. Leeway allow 5°, wind on starboard bow.

True Course S. 37° E. = 143°
Error + 13 (Chart to Compass)
Leeway + 5 (,, ,,)

Compass Course S. 19° E. = 161°

THE THAMES BARRIER

Thames Water Authority
Thames Barrier, Eastmoor Street, London, SE7 8LX

he Flood Threat

45 square miles of Greater London could be in danger of ooding from tidal reaches of the River Thames if weather onditions in the North Atlantic and North Sea cause surges in ie sea level above predicted tide levels.

The risk of flooding increases as London and South East ngland slowly sink and the tide levels rise.

Water levels are affected also by the amount of fresh-water ow from the catchment area of the Thames Valley.

The greatest surges ocurs when a trough of low pressure, reating a hump of water under it, moves eastwards across the tlantic into the shallow waters of the North Sea and then veers outh east. The height of the surge may then be increased by rong northerly winds.

If a high surge reaches the bottleneck between South East ngland and the Low Countries and then enters the Thames stuary on top of a high tide there can be real flood danger ong most of the tidal Thames.

Flood protection for London and the tidal Thames coasts.

After considerable research the solution adopted was to build flood barrier across the Thames in Woolwich Reach and then raise the river banks downstream. The works were operaonal at the end of 1982.

The Thames Barrier lies almost mid-way along Woolwich each, 1·5 kilometres upstream of the Woolwich Ferry and bout 13 kilometres along the river from London Bridge. It rovides four main navigation openings each 61 metres clear idth with sills at 5·90m below chart datum and two subsidiary avigation openings 31m wide with sills at 1·25m below chart atum. A further four 31m openings are provided across the rying out areas of the foreshore but these are not for avigation. The navigation openings can be closed when ecessary by rising sector gates, normally housed in the sills, ith all parts below sill level. The other openings are closed by lling radial gates which are held above the water when open.

The current operating arrangements for the Thames Barrier re designed to prevent water level at London Bridge from rising bove 4·87m., approximately 0·4m below the level of flood efences, and about one metre above mean high water of spring des. There have been three closures for flood defence since the arrier became operational in 1982, but operational checks and ials require movement of each gate once every 14 days and osure of the whole barrier for a short period at low water once very month.

Navigation through the Thames Barrier at all times is ontrolled by the Port of London Authority from the Thames arrier Navigation Centre which overlooks the river just ownstream of the Barrier. Regulations are set out in Notice to lariners 3 of 1986 dated 30th January 1986 issued by the arbour Master, Port of London Authority, Thames House, t. Andrews Road, Tilbury, Essex, RM18 7JH. Owners, Agents nd Charterers should ensure that the contents of the Notice are ade known to the Masters or persons in charge of their vessels r craft.

Thames Water Authority has responsibility for operating the Thames Barrier and other defences to prevent tidal flooding, and for maintaining the defences, but in doing so the Authority must comply with obligations set out in the Thames Barrier and Flood Prevention Act 1972, and in the Thames Barrier Operation Scheme 1987. The more important conditions require programmes of test and trial closures to be published well in advance; these are included in Port of London Authority Notices to Mariners, and the agreement to give two hours notice to the Port of London Authority for closures for flood defence. This condition, and the need for storage capacity for freshwater flow coming downriver mean that the decision to close the barrier must be made on the basis of forecasts of high water. It would be too late to wait for direct observations of the rising tide in the Estuary.

The dangerous water levels are caused by weather so all the forecasting methods depend on information from the Meteorological Office.

The first is a general weather watch using broadcast weather forecasts and shipping charts transmitted by facsimile machine from the London Weather Centre. From these, weather patterns which might cause problems can be foreseen, perhaps two days ahead but, to avoid unnecessary closures, accurate forecasts of tide levels are needed about six hours ahead of high water.

After sever flooding in 1953 the East Coast Storm Tide Warning Service was set up to warn the whole of the East Coast from the Tyne to the Thames of unusual tidal activity which might cause flooding. The Service developed empirical equations to forecast tide levels using tide gauge readings from Stornaway to Southend-on-Sea and forecasts of wind strengths and directions in the North Sea. The method is quite reliable; it has been used for many years as the basis for the London Tidal Flood Warning System which is now superseded by the Thames Barrier. But it errs on the safe side, enough to cause a high proportion of unnecessary warnings.

In a continuing effort to improve accuracy, the Meteorological Office now uses a computer processed mathematical model using sets of theoretical equations to represent the behaviour of the seas and the atmosphere over the continental shelf. Twice each day it produces weather forecast information and a forecast of sea levels at hourly intervals for thirty six hours ahead. The results are transmitted to the Thames Barrier by a direct link with the Meteorological Office computer.

The general plan for flood defence operations of the Thames Barrier provides for closure within two hours after low water. The actual timing for a particular incident will depend on the tidal conditions and river flow. For high surge levels closure would be made close to low water but for lesser surges closure could be later. Once the Barrier is closed it must remain closed until upstream and downstream water levels are equal again. The period of closure could be from six to ten hours, depending on tidal conditions.

TANKER HANDBOOK FOR DECK OFFICERS

By Captain C. BAPTIST **£19·00** (per post £21·90)

Captain Baptist, actively engaged in Tanker operation, has taken the opportunity of adding to the new edition a considerable number of new illustrations and diagrams not shown in any other book to extend the field of the publication. The very latest pumps and pumping equipment are described. There are large diagrams showing tankers elevation and giving trim tables and pipeline layout.

Contents:—Introduction—History of Oil Transportation at Sea—Pumps and Pumping equipment—Oil Tanker Cargo Systems—Heating, Cooling and Ventilation Systems—Petroleum Products—Gas Freeing and Tank Cleaning—Loading Crude Oil—Discharging Crude Oil—The Carriage of Refined Oils—Special Cargoes —Oil Tankers in Ballast—Miscellaneous Pumping Data.

Worked Examples in Radar Plotting

By I. W. BAGSHAW

This book has been compiled in response to requests from candidates for the D. o. T. Radar Observer and First Mate F.G. examinations.

It in no way replaces the several excellent works of reference on radar and radar plotting but hopes, by taking only those individual examples which cover the whole range of plotting requirements likely to be encountered by the above mentioned students, to supplement these works with their many exercises.

By taking isolated examples and working from a very basic plot, it is hoped that the text will give students self confidence by taking away the apparent mystique surrounding plotting and giving them a chance to build up expertise in the range of examples offered.

BOAT WORK

The Care, Handling and Navigating of Small Boats

(An Introductory Handbook)

£7·00 (per post £7·86)

By Captain L. G. TAYLOR, Extra Master, M.N.

THIS handbook is entirely basic in its treatment of the wide involvement of taking boats and yachts away from the shore and out into open sea conditions. Its intention is not to confuse the reader with the broad facets of professionalism associated with seamanship and navigation although both condition thinking in "Knowing your boat and what it can be expected to do".

None the less, its contents within 102 pages cover boat forms and their influence upon safe handling; sail types and their correct usage; wind and weather and the associated meteorological influences; the language of the sea and its interpretation in meeting all the exigencies of maritime behaviour.

The section on navigation covers the importance of chart work, the setting of courses and the fixing of position and the effect of tidal factors.

ROUND THE CLOCK SERVICE 365 DAYS

THE NAUTICAL ALMANAC AND ITS USE

THE general problem in nautical astronomy—finding a position line from an altitude observation of a celestial body—requires knowledge of the celestial position of the observed body (Sun, Moon, planet or star) for the instant of time at which the observation is made. The required information is provided in the *Nautical Almanac* from which the declination and Greenwich Hour Angle (G.H.A.) of the Sun, Moon, navigational planets, or the First Point of Aries (♈) can be lifted if the Greenwich Mean Time (G.M.T.) of the observation is known. To facilitate stellar navigation, the Sidereal Hour Angles (S.H.A.s) of the navigational stars are tabulated; so that the G.H.A. of a star is readily found by adding together the G.H.A. of ♈ and the S.H.A. of the star.

The co-ordinates declination and G.H.A., which are used to define the position of a point on the celestial sphere, correspond to the co-ordinates latitude and longitude, which are used to define the position of a point of the terrestrial sphere. In other words the declination of a point on the sky is its angular distance north or south of the celestial equator, whereas the latitude of a point on the Earth is its angular distance north or south of the terrestrial equator. Likewise, the G.H.A. of a point on the sky is equivalent to the measure of an arc of the celestial equator westwards from the Greenwich celestial meridian to the meridian of the point, whereas the west longitude of a point on the Earth is a measure of an arc of the Earth's equator westwards from the Greenwich meridian to the meridian of the point.

The main body of the *Nautical Almanac* (reproduced on pp. 20–263) is, essentially, a series of ephemerides of the First Point of Aries, the navigational planets (Venus, Mars, Jupiter and Saturn), selected stars, Sun and Moon. The ephemeral data for three successive days are given on facing pages of the Almanac. The G.H.A. of ♈ and the G.H.A. and declination of each of the navigational planets, are given on left-hand facing pages; and the G.H.A. and declination of the Sun and Moon are given on right-hand facing pages for each integral hour of G.M.T. The S.H.A.s of selected stars are given on left-hand facing pages.

To find the declination and G.H.A. of a celestial body or ♈ for a G.M.T. which is not an exact hour, 'Increment and Correction Tables' are used. These are given on pp. 265–295 inclusive.

Because the rates of change of the G.H.A.s of the various celestial bodies are not the same it is necessary to have separate increment tables for the Sun, ♈, and the Moon, and care must be taken to extract incremental data from the correct column when using the tables. Although the rates of change of the G.H.A.s of the Sun and the navigational planets are different, the increments for planets, are found from the incrementable for the Sun and a correction based on the different ence between the respective rates of change of the Sun's and the planet's G.H.A. is obtained from the 'correction' table. The required correction is known as the 'v-correction'. The same correction table serves to find the correction for declination—a correction known as the 'd-correction'. The hourly changes in declination of the Sun, Moon and each of the navigational planets, as well as the variation in the hourly rate of change of a planet's G.H.A. compared with the Sun's, are given as 'd' and 'v' respectively in the main body of the *Nautical Almanac*. Care must be taken when applying the 'd-correction'—whether it is positive or negative depends upon whether the declination is increasing or decreasing with time. The 'v-correction' for the Moon and the navigational planets is always positive except for Venus when it is sometimes negative.

The following examples illustrate the use of the Almanac for finding the G.H.A. and declination of an observed celestial body.

Example 1 Find the G.H.A. and declination of the Sun for 08h 20m 40s G.M.T. on January 21st, 1988.

From *Almanac* (p33)	G.H.A. at 08h	= 297° 13·3′
From Incr. Table (p276)	incr. for 20m 40s	= 5° 10·0
	Required G.H.A.	= 302° 23·3′
From *Almanac* (p33)	dec. at 08h	= 20° 02·9′S. d=0·5
From Corr. Table (p276)	d-correction	= −0·2′
	Required dec.	= 20° 02·7′S.

Example 2—Find the G.H.A. and declination of the Moon for 11h 40m 30s G.M.T. on February 10th, 1988.

From *Almanac* (p47)	G.H.A. at 11h	= 83° 33·6′ v = 11·3′
From Incr. Table (p286)	Increment	= +9° 39·8′
From Incr. Table	v-correction	= +7·7′
	Required G.H.A.	= 93° 21·1′
From *Almanac* (p47)	dec.	= 20° 13·4′S. d=11·4
From Corr. Table (p286)	d-corr.	= +7·8′
	Required dec.	= 20° 21·2′S.

Example 3—Find the G.H.A. and declination of Jupiter for 13h 16m 40s G.M.T. on March 19th, 1988.

From *Almanac* (p70)	G.H.A. at 13h	=341° 47·9′ v =1·9′
From Incr. Table (p274)	incr. for 16m 40s	= 4° 10·0′
From Corr. Table (p274)	v-correction	= 0·6′
	Required G.H.A.	=345° 58·5′
From *Almanac* (p70)	dec. at 13h	= 11° 21·4′N. d=0·2
From Corr. Table (p274)	d-corr.	= 0·1′
	Required dec.	= 11° 21·5N.

Example 4—Find the G.H.A. and declination of Arcturus at 04h 36m 12s on March 31st, 1988.

From *Almanac* (p78)	G.H.A. ♈ at 04h	= 248° 44·9′
From Incr. Table (p284)	incr. for 36m 12s	= 9° 04·5′
	G.H.A.	= 257° 49·4′
From *Almanac* (p78)	S.H.A. Arcturus	= 146° 12·7′
	G.H.A. Arcturus	= 44° 2·1
From *Almanac* (p78)	Dec. Arcturus	= 19° 14·3′ N.

Besides providing ephemeral data for the Sun, Moon, ♈, planets and stars, the *Nautical Almanac* gives other tabulated data to facilitate astronomical navigation.

On each pair of facing daily pages are given the times of meridian passage of the Sun, Moon, ♈ and each of the visible navigational planets. The times are, strictly, G.M.T.s of the meridian passages over the Greenwich meridian. They are, therefore, approximately equivalent to L.M.T.s of meridian passages at local meridians.

The meridian passage of a heavenly body occurs at the instant the body's local hour angle (L.H.A.) is zero. The time, therefore, of a star's meridian passage can readily be found given the star's S.H.A. and the L.H.A. ♈, because a star is at meridian passage when its S.H.A. and the L.H.A. at the same instant sum to 360°. The quickest way of finding the time of a star's meridian passage is to take the difference between the star's S.H.A. (expressed in units of time: 1 hr = 15° and 24 hours and add it to the tabulated time of the meridian passage of ♈.

Example—At what L.M.T. is the star Fomalhaut on the meridian on August 20th, 1988.

From *Nautical Almanac* (p174):

S.H.A. Fomalhaut	= 15° 44·1′
S.H.A. (in units of time)	= 01h 02·9m
24h−01h 02·9m	= 22h 57·1m
mer. pass. ♈	= 02h 05·5m
mer. pass. Fomalhaut	= 01h 02·6m L.M.T.

Because the interval between successive upper meridian passages of the Moon across a given meridian is shorter than 24 hours by an amount which averages about 50 minutes, it is necessary to apply a correction for longitude to the tabulated time given in the *Almanac* to find the corresponding time of meridian passage for a longitude other than that of Greenwich. The correction, which depends on the *daily difference* between the lengths of the solar and lunar days and the longitude, is to be added to the tabulated time for west longitudes and subtracted for east longitudes. The table on page 7 facilitates the problem of finding the so-called 'longitude correction', as illustrated by the following example.

Example—Find the G.M.T. of the Moon's upper meridian passage across the meridian of 80° W. on March 11th, 1988.

From *Nautical Almanac* (p67):

G.M.T. of upper mer. pass. long. 0°	= 05h 50m diff. =61m
Longitude Correction (Table p. 7)	= +13m
L.M.T. of upper mer. pass. long. 80° W.	= 06h 03m
Longitude in time	= 05h 20m
G.M.T. of upper mer. pass.	= 11h 23m March 12th

The semi-diameter (S.D.) of the Sun is given at the foot of the Sun column on the right-hand daily page. The value is applicable for the three days covered. That for the Moon, however, is given for each of the three days covered, the Moon's semi-diameter changing relatively rapidly.

The horizontal parallax (H.P.) of the Moon is given for each hour of G.M.T.

Semi-diameters of the Sun and Moon and horizontal parallax of the Moon are given to facilitate the problem of correcting altitudes.

To correct the observed altitude of a star to obtain its true altitude, the altitude correction (as given in the table on page 7) is a combination of dip (arising from the depression of the sea horizon due to the elevation of the observer above the sea surface) and atmospheric refraction. The table is entered with the observed altitude and the height of the observer's eye above the sea surface in feet, and the corresponding correction is always subtractive from the observed altitude.

To correct the observed altitude of the lower limb of the Sun to obtain the true altitude of its centre, the

table on page 6 may be used. The table is entered with the observed altitude and the height of eye, and a secondary correction from the foot of the table allows for the variation in the value of the Sun's semi-diameter month by month.

The values of the Moon's semi-diameter and horizontal parallax are intimately related, one always being a constant number of times the other. This facilitates the design of an altitude correction table for the Moon, such as that given on page 8, which gives the correction using arguments observed altitude and horizontal parallax. The table is compiled using a height of eye of 70 ft. For heights different from this, a secondary correction, given at the foot of the table, is necessary.

On right-hand daily pages, comprehensive tables give the times of twilight, sunrise, sunset, moonrise an moonset. The times (strictly G.M.T.s for the Greenwich meridian) may be taken to be equivalent to L.M.T.s for all meridians. The tables are entered with latitude and the required times lifted with no difficulty. The following symbols are used:

to indicate that the Sun or Moon is continuously above the horizon;

to indicate that the Sun or Moon is continuously below the horizon;

to indicate that twilight lasts all night.

Twilight applies to the light that is received from the Sun after sunset. It is due to scattering and reflection of sunlight in the atmosphere.

The intensity of twilight depends upon the angular distance of the Sun below the horizon. Twilight that is received when the Sun is between 12° and 18° below the horizon is weak and does not permit the horizon to be visible for star-sights. This is called *Astronomical Twilight*. Twilight that is received when the Sun is less than 6° below the horizon is called *Civil Twilight*. During civil twilight the horizon is visible but most of the stars are not visible because of the strong twilight. For star-sights the stars and the horizon must be visible and this is possible only during the period of so-called *Nautical Twilight*, which is received when the Sun is between about 6° and 12° below the horizon.

Finding latitude at sea is facilitated by measuring the meridian altitude of a heavenly body. After correcting the observed altitude to obtain the true altitude, the body's zenith distance (which is the complement of its true altitude) is combined with the body's declination to give the observer's latitude.

The Pole Star provides an alternative method of finding latitude. Special *Pole Star Tables* (given on pages 302–304) enable an observer to find his latitude as well as the true azimuth of the Pole Star to facilitate the checking of his compass. Instructions for using these tables are given with the tables.

This part of *Brown's Nautical Almanac* is concluded with a series of stellar diagrams and their accompanying explanations to assist the novice in star recognition.

AN INTRODUCTION TO SPHERICAL TRIGONOMETRY

BY

J. H. CLOUGH-SMITH

B. Sc. (Lond.), Extra Master, F. Inst. N.

£6·00 (per post £7·32)

The contents of this book are based on experience gained whilst teaching the subject in the Department of Maritime Studies in the University of Wales Institute of Science and Technology.

It is my hope therefore, that this book will commend itself to teachers of navigational subjects at all levels and particularly to students working for qualifications at the highest standard available. At the present time, in the United Kingdom, this is represented by courses for the Extra Master's Certificate or for the B.Sc. degree in maritime studies now offered by many colleges. This book should prove adequate for either of these or for any other similar courses up to first degree level.

BROWN, SON & FERGUSON, LTD., 4-10 Darnley St., GLASGOW G41 2SD

Royal Navy, Rum, Rumour and a Pinch of Salt

By E. T. ASHTON

£9·95 Per post **£11·00** Overseas **£11·27**

This book is to a large extent the life story of one of the authors, Tom Hayward. He ended his Royal Navy career as Chief Petty Officer, Supply Branch. He then went into the Coastguard Service for several years. His father was in the Royal Navy, and then the Coastguard Service, and so was **his** father. The book gives an entertaining account of Lower Deck life, as seen through the eyes of one of its senior members. It particularly throws light on the Supply Branch, one of the most essential branches of the Royal Navy; comparatively little has been written about this section of the Service. Additionally, Chief Petty Officer Hayward makes shrewd, and often amusing, comment on naval events, big and small, from the 1920's to the end of World War II. The concluding section of the book deals with service in the Coastguards, a big contrast to his career in the Royal Navy, mainly in big ships. Further comments are made by his co-author, mainly on small ships, of which he had much experience, in frigates during the War, and in a R.N.V.R. squadron for ten years after the War.

PLANETARY INFORMATION, 1988

January—Mars is a morning star. Jupiter and Venus are evening stars. Saturn is too close to the Sun for observation.

February—Mars and Saturn are morning stars. Jupiter and Venus are evening stars.

March—Mars and Saturn are morning stars. Jupiter and Venus are evening stars.

April—Mars and Saturn are morning stars. Venus is an evening star. Jupiter is too close to the Sun for observation.

May—Mars is a morning stars. Venus is an evening star. Saturn is visible throughout the night. Jupiter is too close to the Sun for observation.

June—Mars and Jupiter are morning stars. Saturn is visible throughout the night. Venus is too close to the Sun for observation.

July—Venus, Mars and Jupiter are morning stars. Saturn is visible throughout the night.

August—Venus, Mars and Jupiter are morning stars. Saturn is an evening star.

September—Venus and Jupiter are morning stars. Saturn is an evening star. Mars is visible throughout the night.

October—Venus and Jupiter are morning stars. Saturn is an evening star. Mars is visible throughout the night.

November—Venus is a morning star. Mars and Saturn are evening stars. Jupiter is visible throughout the night.

December—Venus is a morning star. Mars is an evening star, Jupiter is visible throughout the night. Saturn is too close to the Sun for observation.
